I see that Cleanmail has just been updated, and as usual, the changelog has a dot point of "Minor improvements and fixes".

What are these minor improvements and fixes? Every change to the software is important to us admins. Any change to expected behaviour is important. I don't think it's appropriate that Byteplant decides what is worthy of a dot-point, and what is not necessary for us admins to know about.

Can you please elaborate on what the latest minor improvements and fixes are?

With every bugfix and new feature in any of our products, our code base is constantly subject to optimizations and clarifications. Thus, changes introduced in other products eventually appear in CleanMail as well, where they only rarely are worth mentioning.

Byteplant's information policy is much more open than that of many other software vendors. But your opinion has been noted and will be taken under advisement.

Here's the list of V4112 minor changes and fixes not explicitly mentioned:

- NOD32 (ecls) default command line improved
- GUI: expire button does no longer open console window
- fixed dashboard sorting bug introduced in V4.0.3.1
- check for updates: don't run on first run after install
- check for updates: use Internet Explorer HTTP proxy settings

Here's the list of V4122 minor changes and fixes (out today):

- fixed broken links in dashboard
  - added some missing tooltips
  - fixed minor expire scheduling problem when switching form daylight saving time to normal time
  - fixed a possible bug in the configuration wizards
  - hide POP3 password in log/GUI
-
