Has anyone migrated to the new version 3 yet? What are your experiences with it, as compared to the previous 2.x version?

We have been relatively happy with the previous version, and of course would like to stop even more spam, or have even more configuration capabilities, reporting, etc... but because we host many email domains, we can't upgrade without serious consideration...

So, for anyone that's taken the plunge, what's your experience with it been like thusfar?

Thanks,

-Budd Wright
