Hi there,
I was wondering if there is yet a way to allow all attachments FROM a given address. Like, if I wanted all emails with attachments from *@webname.com to be passed through the attachment filter I would just add that to the attachment filter's whitelist.

Is this something I can set up?

NoSpamToday! does currently not support such a configuration option.
I added this as a feature request to the wish list for the next major release.
Thank you very much for your feedback.

I thought you could do this is you specify an "address pattern to disable the filter" (first screen of the Attachment filter)

I've implemented this on my server by having two attachment filters in a stacked together - the first one I disable the filter for the domains that I want mail to come through from. Then in the second filter I removed the domains from the "address pattern to disable the filter" and instead I deleted the virus patterns that I am willing to accept from those select domains. Things like zip, doc, xls... this lets me choose the "trusted" domains AND choose which files from those domains that I am willing to accept.

Heidner,

I thought the address patterns on the first screen were for internal addresses only. You enter an internal address such as john@here.com and any email received that is TO that address is passed through without being looked at.

What I am wanting to do is allow attachments FROM a given domain such as *@yahoo.com. This feature would be very usefull for us as we have many employees that would like to receive attachments from a domain of users (another agency) outside of our organization.

You are correct -- now I'm wondering if I just hit a bug that will be closed up later on....

I think we really want both options - the ability to specify enable / disable for in house receiptents. AND accept from "trusted senders". This would probably be useful for all but the spam assassin filters.
