
Subject: SpamAssassin being ignored?

Hi there,

Got a serious problem at the moment ... and not sure what's caused it (probably me!) or how to solve it ... can anyone help?

It appears my mails are not being checked by SpamAssassin on the way in.

I can see only two extra X_ header fields (X_MimeOLE and X_MSMail_Priority) being added and the SPAM scoring, etc, is non-existent.

I've included an extract below. The SpamAssassin command timed out doesn't look right.

I've tested the rulesets using SA-LINT.BAT and apart from two entries with no score, that are ignored, all others are fine.

```

Look for "X-" headers, not "X_" headers.

If SpamAssassin times out, it is probably because automatic expiry did not terminate within the timeout configured for the filter. For this reason we do not set a timeout in the default configuration of the SpamAssassin filter.

If you want to keep the timeout, run expire.bat regularly (you can use the Windows task scheduler for this). You should also set

bayes_auto_expire 0

in the local.cf file.

NoSpamToday! version 3 will do Bayes database expiry itself, but until then the policy lined out here works best.

Meanwhile with version 2.xxx you can force the expiration at one of your slower times (mine is 2AM)... by creating a .bat file which contains something like:

```
cd your_drive_letter:\program files\nospam today!  
sa\salsa-learn.exe -C sa\ruleset --showdots --force-expire
```

I've the same trouble, but bayes_auto_expire is already 0. I have now 172.000 words in the SpamAssassin database, its size is 15.424 kbytes.

What to do ?

Thanks for your help.

Give SpamAssassin more time, and disable the timeout (2 minutes may be a too short). Usually the MTA submitting the message has a timeout itself, and if it hasn't there is always NoSpamToday!'s timeout, so there is no chance for SpamAssassin instances staying around forever.

If everything is OK, however, processing should not take more than a few seconds on average. If processing times are always in the range of several minutes, there might be something wrong with your setup. To thoroughly test the SpamAssassin filter, use the setup dialog (advanced options enabled). You can tweak and test the commandline options (try -D for debug output).
