Is there a way that all mail deemed spam can go to one central mail box. I need to do this to handle messages that were the victim of false positives.

Thanks

NoSpamToday! SMTP Proxy Version 2.0 has an option to quarantine Spam and Virus mails by redirecting them to a separate mail account.
See <http://www.byteplant.com/company/news/04081901> for more information.

If you use Exchange, then yes - I can give a solution.

Cheers, Rob.

Would an option for "Accept and Redirect" be beneficial for your users? I find the "undeliverable" messages created by bounces to forged addresses to be a huge percentage (and growing) of the nuisance mail I manually filter on a daily basis.

Some originate as spam to valid recipients and others to no longer valid recipients.
