I have seen this appear now a few times in my email I get daily from NST, I can't easily find an explanation of these in the pdf.

Should I be concerned about the 13 Recipient reject count?

what do they both mean?

Traffic Limiting:

Host/helo connection count exceeded	2
Recipient reject count exceeded	13

Traffic limiting can be modified in the SMTP proxy setup... these are values on the about the fourth screen. I believe the defaults are 10 and 10, so at some point you must have changed the values from the original default values.

Host/Helo connection count excede 2

Cheers Heidner

I have looked in the proxy and yes my max rejeced Recipients is set at 10 so i will leave that.

The others on the traffic limiting screen are as follows:

HostConnectionCount: EMPTY
HeloConnectionCount: EMPTY
Host NDR Connections: EMPTY
Helo NDR Connections: 1

Do you know if this is correct or should their be values in each box?

These are the out-of-the-box settings, which usually work for most people.

For the long explanation, please consult the manual, section 4.3.6 (Mail flooding protection), and section 7.1.4.4 for the config file reference.

I am using the delay filter and you say the default settign is too low

I have set them all to 5

is that enough?
