Hi,

We're using the delay filter (with a delay of 10 seconds) and I wanted to know two things:

1. Is it possible to disable the delay filter if the mail arrives *FROM* a specific mail address?
2. How can I tell how many emails were dropped by the delay filter? and how should such a session look like in the nospamtoday.log logfile?

Thanks,

Yuval.

This feature will be available for all filters in NoSpamToday! Version 3.

Look for the "Delete (unexpected client disconnect)" line in your daily NST admin mail.

A session using the delay filter (with a delay of 30 secs) usually looks like this:

Dec 19, 2006, 18:13:15 Session 0: 354 Start mail input; end with .

Dec 19, 2006, 18:13:16 Session 0: Received end of data, mail size 2kB

Dec 19, 2006, 18:13:16 Session 0: (Delay Filter) Start delay

Dec 19, 2006, 18:13:45 Session 0: Connection closed by client

Dec 19, 2006, 18:13:45 Session 0: Incoming mail action: delete (unexpected client disconnect)
