I seem to recall some time ago (I don't think I was dreaming) that it was hinted in a e-mailed newsletter that V 3 of NST was hopefully going to be released in December of 2006.

How are we looking as far as that goes or was I in fact dreaming?

What are some of the new features to look for? What will the pricing be?

Thanks,
John

I was hoping to see a web interface... Mostly a place where a user could add an email address or domain to the a white list.

Are there any plans for something like this?
